

Palos Verdes Peninsula Unified School District Vision for Technology – 2002 and Beyond

Palos Verdes educators and parents embrace the following vision of technology in our schools.

- Student learning is supported with reliable, accessible and appropriate technologies to gather accurate and timely information from a variety of sources, to construct knowledge, and to communicate with other learners and experts.
- Teachers are enabled by technology to act as facilitators for student learning and to encourage students to explore, analyze, and hypothesize about historical and real-time global events and issues with freedom from physical limitations of time and locale.
- The teaching and learning process is enriched with technology by encouraging interaction among teachers and learners and strengthening the connection between home and school.
